WO 2005/122485 PCT/KR2005/001811

Claims

A method for constructing plural signals in the MIMO-WLAN system which [1] transmits a data packet as the plural signals through multiple antennas, comprising: constructing a data packet to include a preamble for data packet transmission, a SIGNAL, an additional information section for data packet transmission of the MIMO-WLAN system and a service data unit; distributing data of the preamble and the SIGNAL in at least one of the plural signals; distributing data of the additional information section in at least one of the plural signals; and distributing data of the service data unit in at least one of the plural signals. The method as claimed in claim 1, wherein the data of the additional information [2] section includes information on the number of the plural signals of the MIMO-WLAN system. The method as claimed in claim 1, wherein the data of the additional information [3] section includes a trasmission method of the MIMO-WLAN system. The method as claimed in claim 1, wherein the data of the additional information [4] section includes a data transmission rate of the MIMO-WLAN system. The method as claimed in claim 1, wherein the data of the additional information [5] section includes a training signal for channel estimation of the MIMO-WLAN system. The method as claimed in claim 1, wherein the step of constructing the data [6] packet places the additional information section prior to the service data unit. The method as claimed in claim 1, wherein the data of the SIGNAL includes [7] LENGTH N data to calculate time information for the data packet transmission according to the transmission rate of the MIMO-WLAN system.
